Summary

B.Tech (AI/ML) graduate with hands-on experience building full-stack and backend applications using Node.js, Express.js, REST APIs, and relational and NoSQL databases, along with AI-powered and real-time systems. Experienced with Docker, cloud deployment, testing, and debugging across the stack, and with integrating external services into working software. Seeking an entry-level Software Development Engineer (Full-Stack / Backend) role focused on backend ownership, APIs, async pipelines, and shipping reliable products.

Experience

Full Stack Developer Intern July 2025 – Jan 2026
Ativeer Solutions *Kanpur, IN*
- Built and maintained REST APIs for an e-commerce backend using Node.js, Express, and MongoDB, including query optimization for faster responses.
- Developed responsive React.js features connected to backend services and the database.
- Applied data-driven UI/UX improvements that increased user session duration by 15%.

Web Development Intern April 2025 – May 2025
Byte Uprise *Nagpur, IN*
- Implemented JWT-based authentication and unit tests with Jest while collaborating in an Agile/Scrum environment.
- Delivered full-stack features using React.js and Node.js; introduced structured testing workflows that improved code reliability and reduced bug reports.
- Improved front-end performance by 30% through code splitting, lazy loading, and caching.

Projects

InvoiceIQ (Invoice Automation Backend) | *Java, Spring Boot, Spring Security, PostgreSQL, JPA, Docker* Source Code
- Architected a multi-tenant Spring Boot backend exposing REST APIs with JWT authentication, role-based access control, and tenant-level data isolation on PostgreSQL.
- Built reliability features including optimistic locking, idempotent operations, audit logging, and server-side validation for consistent invoice approval workflows.
- Integrated a FastAPI/Tesseract OCR service with JobRunr for asynchronous, PostgreSQL-backed job processing; managed schema changes with Flyway migrations.
- Wrote 48 Java integration tests (JUnit, MockMvc, Testcontainers) and 6 Python tests, all passing.

Interview Copilot AI (Real-Time AI App) | *React, Node.js, Express.js, Socket.IO, Gemini API, OpenAI API* Live App
- Built a real-time AI app with React, Node.js, and Express.js for interview prep, coding practice, and resume analysis.
- Implemented Socket.IO client-server communication with incremental AI response streaming.
- Integrated Gemini and OpenAI APIs with automatic provider fallback and an offline knowledge-engine fallback to keep the app available when providers are unavailable.
- Added browser speech recognition, document processing, and optional screen context.

SRRIS (Stroke Risk & Recovery Intelligence System) | *FastAPI, XGBoost, VGG19 CNN, OCR, Docker* Source Code
- Built a FastAPI backend combining ML, deep learning, NLP, and OCR workflows for stroke-risk and recovery analysis.
- Developed a multi-model pipeline (XGBoost, Random Survival Forests, VGG19 CNN) and an OCR/NLP pipeline that converts scanned and handwritten medical documents into structured data.
- Created a causal-analysis sandbox for exploring "what-if" intervention scenarios.

Skills

Languages: JavaScript, TypeScript, Python, Java, SQL
Backend & APIs: Node.js, Express.js, NestJS, REST APIs, Spring Boot, FastAPI, WebSockets, Socket.IO, JWT
Databases: MongoDB, PostgreSQL, Redis, MySQL
DevOps & Cloud: Docker, AWS EC2, Linux, Git, CI/CD, Deployment
Engineering: Debugging, Testing (JUnit, Jest), API Design, System Integration
Frontend: React.js, HTML, CSS
Core CS: OOP, DSA, DBMS, Operating Systems, Computer Networks

Education

G. H. Raisoni College of Engineering and Management Aug 2022 – May 2026
B.Tech in Artificial Intelligence and Machine Learning *Nagpur, Maharashtra*
