Summary

B.Tech graduate in Artificial Intelligence and Machine Learning with hands-on experience developing and testing full-stack applications, backend services, REST APIs, and AI-powered software. Experienced with Java, JavaScript, Python, Spring Boot, Node.js, SQL, Docker, and CI/CD, with practical exposure to LLM API integration, prompt engineering, automated testing, and Agile/Scrum workflows. Focused on building reliable, maintainable software and solving complex technical problems through debugging, system integration, and collaborative development.

Experience

Full Stack Developer Intern July 2025 – Jan 2026
Ativeer Solutions *Kanpur, IN*

- Built and maintained REST APIs for an e-commerce backend using Node.js, Express, and MongoDB, including query optimization for faster responses.
- Developed responsive React.js features connected to backend services and the database.
- Applied data-driven UI/UX improvements that increased user session duration by 15%.

Web Development Intern April 2025 – May 2025
Byte Uprise *Nagpur, IN*

- Implemented JWT-based authentication and unit tests with Jest while collaborating in an Agile/Scrum environment.
- Delivered full-stack features using React.js and Node.js; introduced structured testing workflows that improved code reliability and reduced bug reports.
- Improved front-end performance by 30% through code splitting, lazy loading, and caching.

Projects

InvoiceIQ (Invoice Automation Backend) | *Java, Spring Boot, Spring Security, PostgreSQL, JPA, Docker* Source Code

- Built a multi-tenant Java Spring Boot backend with REST APIs, JWT authentication, role-based access control (RBAC), and tenant data isolation.
- Implemented invoice approval workflows with validation, audit logging, optimistic locking, idempotent REST APIs, and database migrations using Flyway.
- Integrated asynchronous OCR using FastAPI, Tesseract, and JobRunr; wrote 48 Java and 6 Python tests using JUnit, MockMvc, and Testcontainers, with unit and integration test coverage.

Interview Copilot AI (Real-Time AI App) | *React, Node.js, Express.js, Socket.IO, Gemini API* Live App

- Built a full-stack AI app with React and Node.js for interview prep, coding practice, and resume analysis with real-time AI assistance.
- Implemented Socket.IO streaming of incremental AI responses, with Gemini/OpenAI and offline fallback.
- Integrated browser speech recognition and document-processing features.

Decentralized Voting System | *Solidity, Ethereum, Web3.js, MetaMask, Truffle* Live App

- Built a blockchain-based voting dApp on Ethereum Sepolia with Solidity and Web3.js, enabling wallet-based voter identity and on-chain vote recording.
- Implemented smart-contract access control and election lifecycle management (`NOT_STARTED` → `ACTIVE` → `CLOSED`), with owner-only candidate and election controls.
- Enforced one-vote-per-wallet and candidate validation at the smart-contract level, with real-time vote counts and emitted blockchain events.

Skills

Languages: Java, Python, JavaScript, SQL
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Testing: JUnit, MockMvc, Testcontainers, Jest
Core CS: OOP, DSA, DBMS, Operating Systems, Computer Networks
Development Tools: Git, Docker, CI/CD, AWS EC2
AI/ML: Machine Learning, NLP, Computer Vision, LLM APIs, prompt engineering, responsible AI
Frontend: React.js, HTML, CSS

Education

G. H. Raisoni College of Engineering and Management Aug 2022 – May 2026
B.Tech in Artificial Intelligence and Machine Learning *Nagpur, Maharashtra*
